SUBJECT INDEX TO VOLUME 5

A

Acetylcholine receptors, myasthenia gravis and, 323-344

Adenoviruses, receptors for, 541-542

Agglutinin, phospholipid turnover in human lymphocytes, effect of on, 13-25

Alloantigens, T-lymphocyte receptors for, 827-846

Allograft rejection, modification of in rabbits using cell-free liver extracts, 125-144

Allotype-bearing cells, of rabbit, effect on synthetic capacity of antibodies directed against receptors of, 223-242

Amino acids, sequence of in carcinoembryonic antigen, 205-210

Anaphylaxis, eosinophil chemotactic factor in, 469-479

Animal studies. See under individual animals

Animal viruses, receptors for, 535-552

Antibodies

artificial body cavity, antibody activity in, 603-618

formation of, role of receptors for T cell products in, 717-736

against β_2 microglobulin, triggering of lymphocytes by, 553-567

synthetic capacity of antibodies directed against receptors of allotype-bearing rabbit cells, 223-242

to thyrotropin, responsible for hyperthyroidism of Graves'

disease, 345-360

Antigen-Ig complexes, T cells carrying receptors for, function of, 501-516

Antigens

alloantigens, T-lymphocyte receptors for, 827-846

associative control of immune response to cell surface antigens, 795-805

Ia antigens and Fc receptors, 243-261

carcinoembryonic, heterogeneity of protein moiety of, 205-210

human cavity fluids, carcinoembryonic antigen-like substances in, 619-629

Anti-receptor antibodies

in hyperthyroidism of Graves' disease, 345-360

insulin resistance, 361-373

in myasthenia gravis, 323-344

Antisera, to mast cells, 437-453

Artificial body cavity, immunoglobulin content and antibody activity in, 603-818

Autoimmune disease, myasthenia gravis, acetylcholine receptors and, 323-344

B

B lymphocytes

activation of, inhibition by interaction with Fc receptors, 455-468

rosette assays in, 685-694

Blast responses

of C_3H/HeJ mouse and rabbit spleen lymphocytes, resemblance to

B-cell mitogenic components of E. coli cell walls, 97-107

- of human circulating lymphocytes to trypsin, 145-162
- of spleen lymphocytes of mice and rabbits, resemblance to mitogenic components of E. coli cell walls, 97-107
- Bovine studies
 - binding properties of colostral anti-dinitrophenyl immunoglobulins G₂, 649-658
 - resistance of immunoglobulins to proteolysis, 631-635
 - serum complement components and one inactivator, 75-86
- C
 - Calcium ion, in lymphocyte proliferation and cytotoxicity, 517-534
 - Cancer studies
 - E rosette formation of sheep red blood cells by lymphocytes from cancer patients, effect of zinc chloride on, 53-67
 - N-terminal amino acid sequences in carcinoembryonic antigen produced by, 205-210
 - Carcinoembryonic antigens
 - heterogeneity of protein moiety of, 205-210
 - human cavity fluids, carcinoembryonic antigen-like substances in, 619-629
 - Cations, increased permeability to and enhanced uptake/transport following mitogen-induced lymphocyte proliferation, 517-534
 - Cell separation procedures, lymphocyte activation by, 637-648
 - Cell surface antigens, immune response to, associative control of, 795-805
 - Cell surface receptors, and lymphocyte migration, 775-793
 - Chemotactic receptors, for Val-(Ala)-Gly-Ser-Glu on human eosinophil polymorphonuclear leukocytes, 469-479
 - Chicken studies, transmission of immunity to Neisseria gonorrhoeae from vaccinated hens to embryos, 69-73
 - Cholera toxin
 - ganglioside receptors and the immune response, 737-756
 - mechanism of action, 387-400
 - Colostral anti-dinitrophenyl immunoglobulins G₂, bovine
 - binding properties of, 649-658
 - Concanavalin A
 - phospholipid turnover in human lymphocytes, effect of on, 13-25
 - receptor mobility, cooperative restriction of by, 569-589
 - Cyclic AMP, control of immune response by, 401-416
 - Cytotoxic phenomena
 - effector cell response, divalent cations and, 517-534
 - E rosette formation by human lymphocytes, 591-602
 - E
 - E rosettes
 - formation by human T lymphocytes, 591-602
 - formation of in sheep red blood cells by lymphocytes from cancer patients, effect of zinc chloride on, 53-67
 - Embryos, immunity transmitted from vaccinated hens to, 69-73
 - Endocrine hormones, graft rejection, effect of manipulation of on, 163-179
 - Eosinophil chemotaxis, receptors for Val(Ala)-Gly-Ser-Glu on human polymorphonuclear leukocytes, 469-479
 - Erythrocytes, formation by human T lymphocytes, 591-602
 - Erythrophagocytosis, assay for quantitation of, 189-203

F

Fc receptors

B lymphocyte activation, inhibition of by interaction with, 455-468

and Ia antigens, 243-261

properties of on macrophages and monocytes, 263-280

Fertilization, sperm receptors on zona pellucida of mammalian egg, 375-385

G

Gamma globulin, human, effect of particulate carriers and of mineral oil in adjuvants on antibody response in rabbits, 181-188

Ganglioside receptors, cholera toxin, 737-756

Gel precipitin reaction, semi-micro quantitative, 659-668

Goat studies, pregnancy-associated serum proteins, early detection of using antiserum to placental antigens, 1-11

Gonococcal vaccines, transmission of immunity to Neisseria gonorrhoeae from vaccinated hens to embryos, 69-73

Graft rejection

endocrine manipulation, effect of on, 163-179

modification of skin allograft rejection reaction in rabbits using cell-free liver extracts, 125-144

Graves' disease, hyperthyroidism in, antibodies to thyrotropin responsible for, 345-360

H

Hemagglutination, reverse phase, identification of group A streptococci by, 41-51

Herpes viruses, receptors for, 542

Human studies

activation of human blood lympho-

cytes in vitro, micro method for, 669-684

carcinoembryonic antigen-like substances in human cavity fluids, 619-629

IgD receptors of lymphoid cells, 807-826

peripheral blood lymphocytes, blastogenic response of to trypsin, 145-162

phospholipid turnover in lymphocytes, 13-25

pregnancy-associated serum proteins, early detection of using antiserum to placental antigens, 1-11

rosette forming cells in man, enumeration of by three methods, 87-95

T and B lymphocyte rosette analysis, 685-694

triggering of lymphocytes by antibodies against β_2 microglobulin, 553-567

I

Ia antigens, Fc receptors and, 243-261

Ig-antigen complexes, T cells carrying receptors for, function of, 501-516

IgD receptors, of lymphoid cells, 807-826

IgE receptors, 437-453

Immunity

associative control of immune response to cell surface antigens, 795-805

control of immune responses by cyclic AMP and lymphocytes that adhere to histamine columns, 401-416

membrane receptors in specific transfer of immunoglobulins from mother to young, 481-500

transmission of to Neisseria gonorrhoeae from vaccinated hens to embryos, 69-73

Immunocompetent cells, in man,

145-162

Immunoglobulin

in an artificial body cavity,
603-618

bovine colostral anti-dinitro-
phenyl immunoglobulins G₂,
binding properties of,
649-658

resistance of bovine and porcine
immunoglobulins to proteoly-
sis, 631-635

specific transfer from mother
to young, membrane receptors
in, 481-500

Immunosuppressive agents, liver
extracts, cell-free, 125-144

Insulin receptors, autoantibodies
to study, 361-373

L

LAT cells, thymosin-induced changes
in cell cycle of, 695-704

Lectins, phospholipid turnover in
human lymphocytes, effect of
on, 13-25

Leukocytes, human eosinophil poly-
morphonuclear, chemotactic
receptor for Val(Ala)-Gly-
Ser-Glu on, 469-479

Ligands

receptor-ligand interactions,
417-436

receptor mobility, cooperative
restriction of by, 569-589

Liver extracts, cell-free, ability
to modify rejection of allo-
geneic skin grafts in the
rabbit, 125-144

Lymphocytes

activation by cell separation
procedures, 637-648

activation of human blood lymph-
ocytes in vitro, micro method
for, 669-684

B lymphocyte activation, inhibi-
tion of by interaction with
Fc receptors, 455-468

blastogenic response of human
circulating lymphocytes to
trypsin, 145-162

of C₃H/HeJ mouse and rabbit
spleen, resemblance of
blast response of to B-cell
mitogenic components of
E. coli cell walls, 97-107
control of immune response by,
401-416

E rosette formation by human
lymphocytes, 591-602

migration of and cell surface
receptors, 775-793

mitogen-induced proliferation
post-recognition ion depen-
dent events in, 517-534

stimulatory and inhibitory de-
tails on human lymphocytes
phospholipid turnover stud-
ies, 13-25

T and B lymphocyte rosette as-
says, 685-694

T-lymphocyte receptors for al-
lergic antigens, 827-846

thymosin-induced changes in c-
ycle of lymphocytes from
aging neonatally thymecto-
mized rats, 695-704

Lymphoid cells, IgD receptors c-
ontrol, 807-826

M

Macrophages, properties of Fc re-
ceptor on, 263-280

Mammalian studies, sperm recep-
tors on zona pellucida of
mammalian eggs, 375-385

Mast cells

antisera to, 437-453

assay for mediator liberation
using ³H serotonin release
from mast cells of mouse,
27-39

Mediator liberation, assay for
using ³H serotonin release
from mast cells of mouse,
27-39

Membrane receptors

on neutrophils, 757-774

in specific transfer of immu-
noglobulins from mother to
young, 481-500

- β_2 Microglobulin, triggering of lymphocytes by antibodies against, 553-567
- Mineral oil, antibody response in rabbits to human gamma globulin, effect of on, 181-188
- Monocytes, properties of Fc receptors on, 263-280
- Mouse studies
- blast responses of spleen lymphocytes, resemblance to B-cell mitogenic components of E. coli cell walls, 97-107
 - ^3H serotonin release from mouse mast cells as an assay for mediator liberation, 27-39
- Myasthenia gravis, acetylcholine receptors and, 323-344
- Myxoviruses, receptors for, 544-545

N

- Neutrophils, membrane receptors on, 757-774
- Nicotinic acetylcholine receptors, myasthenia gravis and, 323-344

ANNUAL MEETING
AMERICAN SOCIETY OF ZOOLOGISTS
SOCIETY OF SYSTEMATIC ZOOLOGY
HOSTED BY
CANADIAN SOCIETY OF ZOOLOGISTS

December 27-30, 1977
Royal York Hotel
Toronto, Canada

Call for contributed papers will be issued April, 1977.*

TENTATIVE SYMPOSIA

- COMPARATIVE HEART PHYSIOLOGY
- DEVELOPMENTAL AND EVOLUTIONARY ASPECTS OF BRAIN ENDOCRINE FUNCTION
- ANTIGEN RECOGNITION
- COMPARATIVE TUMOR IMMUNOLOGY
- COMPARATIVE AUTO-IMMUNE DISEASE MODELS
- VERTEBRATE APPENDAGE REGENERATION
- POLYAMINES IN EMBRYONIC DEVELOPMENT
- NEUROMUSCULAR INTERACTIONS
- MARINE LARVAE: METAMORPHOSIS AND SETTLEMENT
- NECTAR FEEDING IN BIRDS
- ADAPTATIONS TO ADVERSE ENVIRONMENTS
- PHYSICAL EVENTS THAT AFFECT BIOTIC PATTERNS
- EVOLUTIONARY MECHANISMS AND PROCESSES
- PHENETIC AND PHYLOGENETIC CONCEPTS AND METHODS OF CLASSIFICATION

*For more details and forms write to: American Society of Zoologists, Box 2739, California Lutheran College, Thousand Oaks, CA 91360.

PHAGOCYTIC ENGULFMENT AND CELL ADHESIVENESS

As Cellular Surface Phenomena

(Microorganisms and Infectious Diseases Series, Volume 2)

by CAREL J. van OSS, CETEWAYO C. F. GILLMAN

State University of New York at Buffalo

and A. WILHELM NEUMANN

University of Toronto, Ontario

November, 1975

176 pages, illustrated

This monograph presents both experimental and theoretical principles of phagocytic engulfment and cellular adhesion, considered from a thermodynamic and surface chemical perspective. After choosing the contact angle method as the most fruitful for investigating links between phagocytic engulfment and interfacial free energies, the authors undertook a sweeping experimental program in 1970. *Phagocytic Engulfment and Cell Adhesiveness: As Cellular Surface Phenomena* assembles the results of these researches in an organized and comprehensive manner. Since the earliest experiments, correlations between thermodynamic predictions and contact angle measurements on one hand, and *in vitro* phagocytosis on the other, suggested the opening of a new field of cell biology investigation. Since that time, a large body of data has accumulated, indicating a number of well-known phenomena that can be satisfactorily explained from a surface-thermodynamics viewpoint.

Phagocytic Engulfment and Cell Adhesiveness: As Cellular Surface Phenomena will be of great importance to microbiologists, surface and colloid chemists, immunologists, pathologists, and infectious disease specialists.

CONTENTS: Introduction. The Contact Angle Method. Measurement of Phagocytosis. Non-Opsonized Bacteria. Role of Antibody and Complement. Effect of Aspecific Plasma Factors and Lymphokines. Effect of Antibiotics and Other Additives. The Effect of Viruses on the Contact Angle of Cell Surfaces. Thermodynamic Considerations and Interpretations. Effect of Particle Size. Cell Shape and Cell Charge. Erythrocytes and Other Blood Cells; Cell Aging. Summary and Conclusions.

INSTRUCTIONS FOR PREPARATION OF MANUSCRIPTS FOR DIRECT REPRODUCTION

IMMUNOLOGICAL COMMUNICATIONS is a bi-monthly journal in the English language for the rapid communication of immunological information.

Directions for Submission to IMMUNOLOGICAL COMMUNICATIONS

One manuscript suitable for direct reproduction (see Instructions for Preparation), carefully inserted in a folder, and two copies of the manuscript must be submitted.

Reprints

Owing to the short production time for articles in this journal it is essential to indicate the number of reprints required upon notification of acceptance of the manuscript. Reprints are available in quantities of 100 and multiples thereof, in addition to the twenty (20) free copies provided to the author(s); a reprint price list will be sent to the author(s) with the notification of acceptance of the manuscript.

Manuscripts should be mailed to:

Editorial Office, The Center for Immunology
203 Sherman Hall, School of Medicine
State University of New York at Buffalo
Buffalo, New York 14214

INSTRUCTIONS FOR THE PREPARATION OF MANUSCRIPTS

Since all the contributions are reproduced by direct photography of the manuscripts, the following instructions must be strictly adhered to. Non-compliance will result in the return of the manuscript to the author(s) and delay in its publication.

Typing Instructions

1. Manuscript must be typewritten, double spaced, on good quality white bond paper measuring at least 8 1/2 x 11 inches.
2. It is essential to use a black typewriter ribbon in good condition so that a clean and clear impression of the letters is obtained. Erasure marks, smudges, creases, etc., should be avoided. (Errors may be corrected by using white opaque correcting fluids or tapes).
3. All formulas and equations should be typed in or carefully prepared in permanent black ink, using drawing instruments.
4. The typing area of page 1, including the title, should be 5 1/2 by 7 inches and that of all other pages 5 1/2 by 8 1/2 inches. Make maximum use of the typing area.
5. Tables should be typed as part of the text but in such a way as to separate them from the text by a three-line space at both top and bottom of each table. The title "TABLE" (capitalized and followed by a Roman number) should precede the table and be centered on the page. Care should be taken that a table does not overlap onto the next page.
6. Drawings, graphs and other numbered figures should be drawn in black India ink (do not use blue ink) on a separate piece of white paper. Photographs should be glossy prints. Lettering set should be used for all labels on the figures or photographs; a typewriter may be used for labels. Captions for the figures should be

typed (single spaced) on a separate sheet, along the full width of the type page. The indication "FIGURE" should be capitalized and, with the figure's number (in Arabic numerals), centered above the caption. The numbers of the figures or photographs as well as the name(s) of the author(s) should be written in blue pencil on the back; the top of the picture should also be indicated on the back. The author(s) should indicate (with a blue pencil) the places in the text where the picture(s) should be inserted.

7. References (including footnotes) in the text will be numbered consecutively by numbers in parentheses. The full references (and footnotes) will be collected at the end of the text. The last names of all authors to any one paper, followed by their initials, shall be quoted. The title of the journal (Chemical Abstracts abbreviations), the volume number (underlined), the first page and the year should follow, in that order. Books should be cited similarly and include the publisher's name and location along with the year and edition of the book. Articles or chapters in books should be cited similarly and include the name of the editor(s) of the book and the page on which the article begins, as well as the volume number.

(journal): Thrasher, S. G., Doroszczak, N. and Cohen, S., J. Immun., 107:1394, 1971.

(book): Pressman, D. and Grossberg, A. L., The Structural Basis of Antibody Specificity. W. A. Benjamin, Inc., New York, 1968.

(article in a book): Milgrom, F., in International Convocation on Immunology, edited by N. R. Rose and F. Milgrom, p. 270, S. Karger, New York, 1969.

Format of Manuscripts

1. The entire title should be in capital letters and centered on the width of the typing area, at least two inches from the top of the page. This is followed by a one-line space and then by the name(s) and address(es) of the author(s), in the following way:

AUTOIMMUNE RESPONSES TO THYROGLOBULIN IN THE RAT

T. J. Atkins and H. Z. Ginsberg

Departments of Microbiology and Pathology,
School of Medicine, State University of New York
at Buffalo, Buffalo, New York 14214

2. The title and the name and address of the author(s) are followed, after a three-line space, by an abstract, comprising less than 10% of the length of the text of the article. The abstract must be typed single-spaced and headed "Abstract".
3. After a three-line space, the article itself commences, whenever possible subdivided into sections such as "Materials and Methods," "Results," "Discussion," "Acknowledgments" and "References." The headings should be centered, underlined, and separated by one extra line space from the typed material that precedes and follows it.
4. Each page of manuscript should be numbered lightly at the bottom of the sheet, with a blue pencil.

CONTENTS OF THIS ISSUE

Special Issue on Immunology of Receptors

T. TADA, M. TANIGUCHI, AND T. TAKEMORI: The Role of Receptors for T Cell Products in Antibody Formation 717

J. HOLMGREN AND L. LINDHOLM: Cholera Toxin, Ganglioside Receptors and the Immune Response 737

P. M. HENSON: Membrane Receptors on Neutrophils 757

M. SCHLESINGER: Cell Surface Receptors and Lymphocyte Migration 775

P. LAKE AND N. A. MITCHISON: Associative Control of the Immune Response to Cell Surface Antigens 795

B. PERNIS AND L. FORNI: IgD Receptors of Lymphoid Cells 807

H. RAMSEIER: T-Lymphocyte Receptors for Alloantigens 827
